Bernd Ralle and Ingo Eilks (Eds.)

**Promoting Successful Science Education
– The Worth of Science Education Research**

A collection of invited papers inspired by the
19th Symposium on Chemical and Science Education
held at the University of Dortmund, 22-24 May 2008

Shaker Verlag
Aachen 2008

Contents

Promoting Successful Science Education – The Worth of Science Education Research (Introduction) <i>Bernd Ralle & Ingo Eilks</i>	1
Towards improving the practice of science instruction - On the state of conceptual change oriented research and development <i>Reinders Duit & David F. Treagust</i>	
Insights into student learning in science: The contribution of longi- tudinal studies <i>Gustav Hellden & Russel Tytler</i>	
Design based research on science education, why and how? <i>Astrid M. W. Bulte, Marijn R. Meijer, Gjalt T. Prins & Albert Pilot</i>	
Learning and Teaching in inquiry-type chemistry laboratories <i>Avi Hofstein & Rachel Mamlok-Naaman</i>	
Developing and implementing new national standards in science education <i>Peter Labudde</i>	
Science education research to prepare future citizens - Chemistry learning in a socio-critical and problem-oriented approach <i>Ingo Eilks, Ralf Marks & Timo Feierabend</i>	
Science teachers' understandings of the nature science (and nature of science education) and its implication for teaching <i>Miia Rannikmae</i>	
Reforming the teaching and learning of the macro/submicro/ symbolic representational relationship in chemical education <i>John Gilbert & David F. Treagust</i>	
The energy problem solved? <i>Rupert Genseberger</i>	
Reading primary research articles by undergraduate biology students <i>Martin Goedhart, Edwin van Lacum & Miriam Ossevoort</i> ...	

Factors affecting high achievers' choices of university majors in science and engineering <i>Hae-Ae Seo</i>	
In-service chemistry teachers' reflection: A metacognitive experience <i>Carmen Fernandez, José G. da Silva Lopes & Josely C. Bonardo</i>	
A research approach to developing teacher subject knowledge: The Case of dissolving <i>John Oversby & Anna Hedderly</i>	
The Model of Educational Reconstruction - a research model for the investigation of students' and teachers' conceptual ideas <i>Ilka Parchmann & Michael Komorek</i>	
Efficiency of systematic support and encouragement in open learning environments of <i>Chemie im Kontext</i> <i>Thomas Brehmkes & Bernd Ralle</i>	
Some reflections on the question of how to promoting successful science education and the worth of science education research <i>Ingo Eilks, Silvija Markic, Bernd Ralle, Albert Pilot, Jack Holbrook & John Gilbert</i>	
Participants of the Symposium
